

Reading the Tides

A season of gauge records

Ada Lovelace

Coastal Observatory

March 2026

The gauge record

- Harmonic fit for the astronomical tide.
- Residuals carry the weather.

```
surge = level - harmonic_fit(level)
```

Gaps

The 2007 season is missing six weeks.

The surge component

01

Station summary

Station	Trend
North pier	+2.1 mm/yr
Harbor mouth	+1.8 mm/yr

Next survey. The
spring tide window.

One inverted slide for the headline number: the ground and ink swap within the same palette, and the accent and status colors carry over unchanged.

+2.0 mm/yr
