

Calmly

A Mosaic re-creation of a Touying theme

Jane Musterfrau

Department of Computer Science, University of Example

February 2026

Foundations

Text styling

Body copy sits a shade lighter than the ink so that **bold text** and headings carry the emphasis on their own.

- **Bold text** for emphasis
- *Italic text* for subtle emphasis
- **Alert text** highlights important terms
- Muted text for secondary information

Lists and structure

Bullets take the secondary accent and numbers take the primary one:

- A first-level point
 - A second-level qualification
 - A third-level aside
 - Another first-level point
1. Numbered items take the primary accent
 2. And keep the same rhythm

Boxes

Key Point

The default accent role, for the one idea to carry out of the room.

Caution

A qualification worth hearing first.

Warning

Critical information.

Layout

Two columns

Left

Each column is an ordinary body cell.
Nothing here is a special layout.

Right

The gap the theme sets is the gutter
between them.

Figures and captions

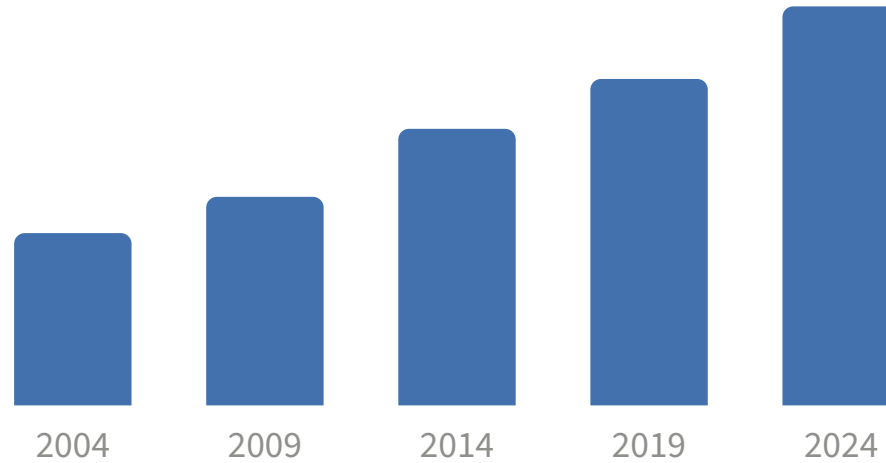

Figure 1: Adoption of the theme, entirely invented

Code

Blocks take the surface fill, a hairline border, and a soft radius:

```
def calmly(variant="light", colortheme="tomorrow"):
    """Resolve a palette for the requested variant."""
    palette = PALETTES[colortheme][variant]
    return palette | {"progress": (palette.secondary, palette.primary)}
```

Inline code such as `variant: "dark"` keeps the ink color.

Mathematics

$$\alpha^* = \arg \min_{\alpha \in \mathcal{A}} \mathcal{L}_{\text{val}}(w^*(\alpha), \alpha)$$

α An architecture drawn from the search space $\mathcal{A}$

$w^*(\alpha)$ The weights that minimize training loss for α

$\mathcal{L}_{\text{val}}$ Validation loss, the outer objective

Methodology

Evidence

Results

Method	Error	Params	GPU hours
Manual baseline	3.46	3.4M	n/a
Search, first order	2.83	3.3M	96
Ours	2.55	2.9M	9

One point at a time

Mosaic adds frames until the last timed command has run:

- The estimate is positive across every specification.
-
-

One point at a time

Mosaic adds frames until the last timed command has run:

- The estimate is positive across every specification.
- The interval excludes zero in the pooled sample.
-

One point at a time

Mosaic adds frames until the last timed command has run:

- The estimate is positive across every specification.
- The interval excludes zero in the pooled sample.
- It does not in the two smallest subgroups.

One point at a time

Mosaic adds frames until the last timed command has run:

- The estimate is positive across every specification.
- The interval excludes zero in the pooled sample.
- It does not in the two smallest subgroups.

Caveat

Power, not sign, is what the subgroups are short of.

Thank you
