FINDINGS FROM A SUBJECT WHO SLEPT THROUGH THE STUDY

# The Optimal Number of Naps

Ada Lovelace <sup>1,2</sup>, Charles Babbage <sup>2</sup>

<sup>1</sup> Institute for Applied Statistics · <sup>2</sup> Analytical Society

March 2026

# The problem

---

Nobody agrees on how many naps a day is correct. We asked the only expert on the subject and he fell asleep during the question.

- Recruit one dog.
- Watch him for a week.
- Write down every time he stops moving.

01

# **The instrument**

# Two ways to count a nap

---

## Strict

- Eyes fully closed.
- Tail completely still.
- Survives one doorbell.

## Generous

- Eyes mostly closed.
- Tail negotiable.
- He looks comfortable, so it counts.

# One pass of the counter

---

```
def count_naps(dog, hours):  
    return [h for h in hours  
            if dog.is_horizontal(h)]
```

## Caveat

Sitting upright with both eyes closed remains contested.

02

**In practice**

# A well-behaved subject

---

The method requires a subject who stays put. This one is world class.

# What it costs him

---

| Naps | Hours |
|------|-------|
| 3    | 4.1   |
| 11   | 9.8   |
