

Speaker notes and the pdfpc sidecar

Vincent Arel-Bundock

August 2026

Slide 1 • Frame 1 of 1

No speaker notes for this frame.

Notes that apply to the whole slide

Every note on this slide is attached to the one frame it renders, so the sidecar carries this text under page 2.

Slide 2 · Frame 1 of 1

Open by naming the question, not the method. Two sentences, then move on. A second note block accumulates after the first, in source order.

Notes tied to individual frames

The estimate is positive.

Notes inside `m.steps.reveal` follow their content, so each physical frame gets its own entry and pdfpc marks the later ones as continuations of the first.

Slide 3 · Frame 1 of 2

Frame-independent: this shows on every frame of this slide.

Give the point estimate before the interval.

Notes tied to individual frames

The estimate is positive. The interval excludes zero.

Notes inside `m.steps.reveal` follow their content, so each physical frame gets its own entry and pdfpc marks the later ones as continuations of the first.

Slide 3 · Frame 2 of 2

Frame-independent: this shows on every frame of this slide.

**Give the point estimate before the interval.
Now the uncertainty. Mention that this is
conditional on the specification in `model.R`, and that
the appendix has the rest:**

- **the fixed-effects variant**
- **the clustered standard errors**

A slide with nothing to say

Slides without notes are simply absent from the sidecar rather than present and empty.

Slide 4 · Frame 1 of 1

No speaker notes for this frame.
