

Slides with a footer

A variant of metropolis

Vincent Arel-Bundock

First section

A slide

The == heading fills the header and this paragraph fills the body. The footer cell fills itself.

Another slide

- The footer content lives in the grid, so it repeats without being written anywhere else.
- The title and section slides use other layouts, so they carry no footer.

Second section

The last slide

Only slides built from footered show the footer.
